

The Plantation Socfinaf Ghana was attributed to Socfin in the context of a privatisation procedure. The former World Bank sponsored Gmelina project of the Subri Industrial Plantation Ltd was replanted with oil palm and rubber as from 2012.

Several HCV and HCS areas are located in the concession area and are under constant treat of illegal logging, poaching and mining. Socfin aims at the creation of buffer zones in order to cure this situation. However this is under the scrutiny of stakeholders.
